Gaps between the courtigs are represented as 
* runs of M. but the exact misses of the gaps are unknown.

* This record will be updated with the finished sequence 
* as soon as it is available and the accession number will

Burs of M are used to separate the reads and the order in which they appear is completely and the order in which they appear is completely any interpretable and the order in which they appear is useful for empirical content to be assemble and allows overlap relationships among clones to be deduced.

**Overlap relationships among clones to be deduced.**

**Overlap relationships among clones to be deduced.**

expending reade that have not been assembled into contigs. The nation of N are used to separate the reads and the order in which they appear is completely and their order in which they appear is completely atheristry. Government among the second is deministry to closes that may be agent-rich and allower and the completely in the second close of the completely. The work is about not be assumed that this scione movement is module into be assumed that this scione where the completely in the event that the record is updated, the accession number will be appeared. NOTE: This record contains 83 individual

Minthly, maintained, testis and angugala crow the present investion which encode the proceins given in ABBOGSCS to ABBOGSCS. The human cDNA sequences and clones can be used in gone thereby. The clones may be used in a variety of applications, for example they may be used in proceins given they may be used in procein continue to the man genetic meteral for implementing large-scale societies.
                                                                                                                                                                                                                                                                                                                                                                                                          Human cDNA sequences and clones derived from human fetal brain, fetal

```
The invention relates to polymonicaties (AMX545-AMX5455) and the encoded polypeptides (AMX9323-AMX90302) that satisfie activity elazing optical projection of cell differentiation or which may induce production of other optokines in other cell populations. The polymonication of other optokines in other cell populations. The polymonication and polymonication are income or peptide and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities e.g. seem cell growth factor activity, hemanogodesis regulating activity induced production of the diagnosis and/or registering of many per useful in the diagnosis and/or registering or once; lenkamia, nervoka speem disorders, arithritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        146 CCCTCGAACTGGGGAGGTCCAGTGGGGTCGCTTAGGGCCCAAAGCCCCCACCCGGCTCCA 205
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CCCTCGAACTGGGGAGGTCCAGTGGGTCGCTTAGGGCCCAAAGCCCCCACCGGGCTCCA 131

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides the protein and coding sequence of novel proteins from a variety of organisms including human dog, cat, horse, cow, pig2 hamster, monkey, macque, yease, bacteris, fruit fly, ease, urchin and townson, These were delived from expressed sequence cage (BSTS) from the organism of increast. They can be used in disgnostics, from the organism of Americated from control or assess boodwareity and for nutritional purposes. The present sequence is a cDNA bookwareity and for nutritional purposes. The present sequence is a cDNA

renal failure, oxidative stress-related neurodegenerative disorders (e.g. amylotrophic lateral sciences), selfathoors disease and latify syndrome), cancer, catiomyopathies, ischemic disorders, inflammatory disorders, diabetes mellitus, fibrotic and measugal disorders. The proceins may also be useful for cell growth regulation (e.g. in wound healing), T cell scrivation, mitosis control, and as immunosuppressants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to isolated polymuclectide (1) and polypeptide (1) sequence (1) is useful as hybridisation probes, polymerase chain reaction (e.g.) princers, oligomers, and for chromosome and gene mapping, and in recombinant production of (11). The polymuclectides are also used in diagnostics as expressed sequence tags
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            23 ACCCTGGGCGCAAACGAGCGAGGCAGGGCGCGAGTGGAAACTGGGAGTTCCGGGGTGGG

(I) is useful in gene therapy techniques core seasons name activity of (II) or or creat disease states involving activity of (II) or or creat disease states involving activity of (II) or or creat disease states involving adaption of the binding partners are weight matters and as a food supplement. (II) and its binding partners are useful for treating a activity of the polypeptide in the binding partners are useful in medital. (II) in the polypeptide mapping (II). (II) and (II) are useful for treating disorders involving aberrant protes in expression or biological scrivity. (II) the polypeptide and polymedocide sequences have applications in diagnostics, forensics, gene mapping, identification of mataions or creating expensible for genetic disorders or other traiter assess biodiversity and to produce other types of data and produces dependent on DRA and confine adaption to this patent of diagnostic confine generates of the invention. (II) application, but was obtained in steucionic former discourse the printed specialism or the printed securition, but was obtained in steucionic former discourse the printed and produced the room in the printed sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               636

the stage that of baing cancerous, where he gene product is encoded by one of the stage polynuclectide sequences given in AA21233 to AA21779. The polynuclectide are be used as a source of primars and probes, which can be used as a source of primars and probes, which can be used as a variety of purpose, e.g. detection of expression levels. Capaping, tissue typhing or profilling, forentiate, spentic analysis and detection of polynorphisms. Polypeptides encoded by the polynuclectides of the polynuclectide encoded by the polynuclectides may also be used to construct a rarys for diagnostic (which may be used to determine function of an encoded protectin); and to detect differences in expression levels between two colls (e.g. to identify a bonomal or diseased takens in a whome, to diseated the prognosts and management or susceptibility to a disease such as connect. The polynuclectides of the invention are especially the disease such as the disease such as the disease such as the disease and antagement of the polynuclectides can also be used to screen for expression and authosomises.
differentially expressed gene product in a test sample from a cell

New nucleic acid encoding p21-activated kinase 5 protein for inducing an immune response, trasting cancers, angiogenesis-related disorders Alsorders of the central nervous system and immune-related disorders

Example 1; Page 36-37; 76pp; English.

The present DNA sequence is the coding sequence (TDS) of human Dpl.

cuttated kinnes of (EAM4) DNA. The protein encoded by DAMI DNA is 687

identical to PASS protein which is a scrint-threonine kinnes. PASS is

cueful for inducing an immune response in a mammal against PASS is

cueful for inducing an immune response in a mammal against PASS is

cueful for inducing an immune response in a mammal against PASS is

polypeptide. PASS proteins are useful in replating of call profile cation,

cat migration, cell office progression, and cell death. PASS, is useful in

cut search Knowl against that can madify and/or control the above

controlled to the progression, and cell death. PASS, is useful in

controlled to the progression, and cell death. PASS, is useful as forth

controlled to the progression, and cell death. PASS, is useful as forth

controlled to the progression, and composite tools for probing

controlled to the progression of the controlled to the responses. PAKS DNA is also useful in gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
                                                                                                                                                                          The invention relaces to an isolated manualian ancides each that encodes by a novel cerime/brecomine tinage or its mutant bounding. Pake is an effector for the offresses has and cdecizis which are involved in the creatibute signal osciedes, morphogenesis and mitogenesis, and mitogenesis, and activates the JMK and page with the three series of this pathways. Inhibiting interaction of pake at the the three countries of the protein of the protein. In inhibiting the critin polymerization and formation of fliopodia. The PAKe with the type of the protein, and as a source of probes for identifying longologies gequences and of fallipense oilgomicated teles for identifying longology agenerices and of antil sense oilgomicated teles for identification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          inhibiting PAK4 expression. The protein, or its fragments are used to raise specific artibotics and these are useful as ligands for therspeutic inhibition of interaction between PAK4 and its marive binding partners. Inhibition of PAK4 activity or expression is used for treatment of cancer and artificial. The present sequence represents the DNA encoding a human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   532 ACCACGGCCAGAGGGGGCCCAGGGAAGGCAGGCAGGCCGAGGCCGGTTCGCCGGTCACAGC 591
